

# ECO-ZYME

## INSTRUCTIONS FOR USE NEW IMPROVED FORMULA

**SEPTIC SYSTEMS:** Start with a three litre dose then one cup per week thereafter. You can even use Eco-Zyme B+ as a cleaner (See instructions below) and rinse into the drains after use.

**ODOUR CONTROL:** For a smelly septic system, treat as above. For smelly bins etc, dilute Eco-Zyme B+ with ten parts water and hand spray onto surfaces. Rinse with fresh water then wipe dry.

**Eco-Zyme B+ doesn't just cover up bad odours it destroys them at their source instantly!**

**LEACH DRAINS:** Leach drains will be treated automatically when you treat a septic system.

**DRAINS:** Pour one cup of Eco-Zyme B+ down smelly or blocked drains. For best results don't use the drain immediately afterwards.

**TOILETS & URINALS:** Hand spray one part Eco-Zyme B+ and ten parts clean water over toilet or urinal (using a sponge or brush if necessary). Leave for a short time then rinse with clean water.

**FLOORS:** (Non carpeted) Mop or sponge with one part Eco-Zyme B+ and 20-50 parts water, depending on how dirty the floor is.

**BATHROOMS:** Dilute Eco-Zyme B+ with ten parts water and use to hand spray or sponge floors, walls, benches, shower recess, bath, basin etc. Rinse off with clean water.

**NO NEED TO OPEN YOUR SEPTIC  
ECO-ZYME WORKS THROUGH  
YOUR HOUSE DRAINS**

Application rates and methods for commercial applications or larger households are available on request.

All Eco-Zyme products are proudly developed and manufactured in Australia.

### Also from Eco-Zyme:

**Stink Stopper:** Non-toxic biodegradable cleaning and odour control for animal enclosures. One pet or a whole zoo, Eco-Zoo is the perfect product to keep your home and your animal's home clean and smelling fresh.

**Stink Stopper for Rural and Industry:** Proven from Piggeries to Poultry Farms and Wineries to Abattoirs, in fact any thing that smells. Stink Stopper really STOPS THE STINK!

**Eco-Zyme Guarantee:  
Eco-Zyme B+ works or your  
money back.**

**Order now and stop putting  
up with Odour and Blockages.**

**Orders: (08) 8331 0060**

**Fax: (08) 8331 8007**

## ECO-ZYME® B+

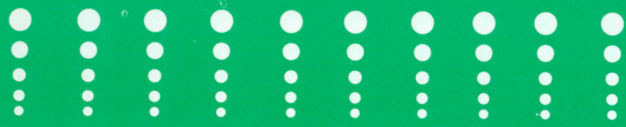

**THE NON-TOXIC,  
BIODEGRADABLE WAY TO  
SAVE ON PUMP-OUT COSTS,  
REPAIR CLOGGED LEACH  
DRAINS AND DESTROY  
ODOUR IN SEPTIC SYSTEMS.**

### THE SOLUTION FOR:

- Septic Systems
- Odour Control
- Leach Drains
- Drain Cleaning
- Toilets/Urinals
- Households
- Effluent Ponds
- Caravan Parks
- Hotels
- Piggeries
- Hospitals
- Dairies
- Export Food Manufacturers and Processors

**Harness Nature's Microbes to Solve  
your Waste and Odour Problems!**

# ECO-ZYME

## What is Eco-Zyme B+?

For over 10 years Eco-Zyme has been fixing Septic Systems here in Australia and Overseas.

Eco-Zyme B+ contains scientifically adapted, highly active natural microbes which break down grease, oil, fibre and sludge. They are contained in a unique blend of dispersants and micro-nutrients which ensures the microbes go straight to work cleaning and deodorising toilets, bathrooms and drains before digesting all new waste entering the septic system.

### ENZYMES

Enzymes break down grease, fat, protein and fibre into simple soluble particles which the microbes absorb as food. The microbes grow and multiply, producing more enzymes until most of the waste has been consumed.

### MICROBES

In nature, microbes are responsible for breaking waste down into simple, harmless products like water and carbon dioxide. When this activity slows down, waste builds up, blockages occur and unpleasant smells are emitted.

Eco-Zyme B+ contains huge numbers of waste digesting microbes selectively bred to tolerate harsh conditions found in blocked pipes and septic systems. When used they burst into life producing a wide range of enzymes to consume waste rapidly.

### TRACE ELEMENTS

High efficiency waste digesting microbes require specially formulated trace elements to ensure they thrive and multiply. These elements are also contained within Eco-Zyme B+. It's like sending the microbes to work with vitamin pills in their lunch boxes.

### GREASE DISPERSANT

Eco-Zyme B+ contains an environmentally safe and biodegradable grease dispersant that breaks down thick grease into globules. It is faster for the microbes and enzymes to attack small globules from all sides than to break through a solid layer of grease. The quicker the microbes can attack the waste the faster it will be digested.

### NON-TOXIC & BIODEGRADABLE

Eco-Zyme B+ is non-toxic when used as recommended, but contact with eyes and ingestion should be avoided. Eco-Zyme B+ is biodegradable and environmentally safe.

## How Eco-Zyme B+ Works

Eco-Zyme B+ is designed to treat the whole system and should be used first as a general purpose cleaner then washed down drains or into a grease trap after use. The dispersant begins to loosen grease and solids, breaking them into globules which flow easily through pipes and drains.

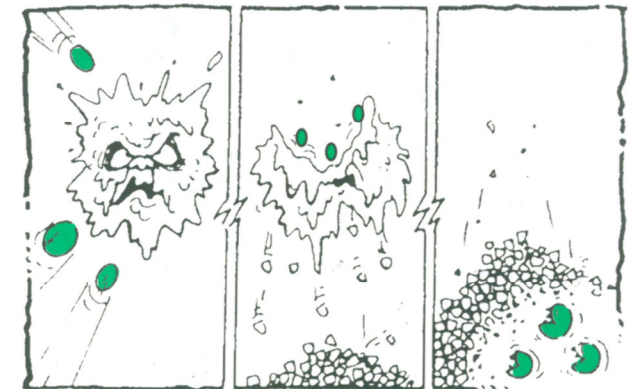

At the same time, its enzymes attack the surface of the grease softening it and breaking it down into simpler substances that are digested by the microbes which spring into life when they come into contact with water. Grease and slime build-up which clogs leach drains is broken down and digested in the same way.

Note: Grease is actually eaten up and converted into simpler materials (most of which dissolve in water). Grease is not just shifted further down the system like harsh chemical solvents and drain cleaners.

Once in the septic tank, Eco-Zyme B+ breaks down organic material and effluent. The first thing you will notice is that the bad smells have stopped.

**Don't be embarrassed by a smelly septic, Eco-Zyme B+ destroys odours at their source instantly!**

Eco-Zyme B+ saves you the embarrassment and disruption caused by bad odours, slow drains and clogged systems. Pumpouts are dramatically reduced.

Fat and smelly solids are broken down and digested.

## How To Use Eco-Zyme B+

### SEPTIC TANKS

To get started, use three litres of Eco-Zyme B+. Flush the concentrate down the toilet and drains leading to the system last thing before you go to bed at night.

Then one cup per week (for an average family home) is all that's required.

Eco-Zyme B+ is also designed to be used to clean floors, bathrooms, laundries etc. When washed down the drains after use, it automatically treats your septic system. Using Eco-Zyme B+ this way removes the need for toxic cleaners that just damage your septic system.
